EDUCATION

Bachelor of Science (Hons), Computer Science University of Hertfordshire	London, UK September 2021 – August 2025
Relevant Courses: Software Architecture, Software Design, Machine Learning & Data Mining, Data Structures & Algorithms	
Diploma, Computer Programming Seneca Polytechnic	Toronto, ON September 2023 – August 2025

PROFESSIONAL WORK EXPERIENCE

Software Engineering Intern VDart	GA, USA – Remote May 2024 – December 2024
- Developed a generative AI recruitment tool using the WhisperX speech recognition tool and FastAPI, transforming 500+ interview audio files into structured transcripts, and analyzed them with PyPDF2. - Fine-tuned Meta Llama3 with Hugging Face on a dataset of 1000+ resumes, boosting analysis efficiency by 40%. - Leveraged Pandas and spaCy to extract key insights, resulting in more accurate candidate profile matching. - Integrated MongoDB (PyMongo) to store and retrieve 10,000+ resumes, reducing recruiter workflow time by 30%. - Engineered a fully responsive interface using Figma and Framer, deployed via DigitalOcean with Docker and GitHub Actions for seamless backend-frontend integration. - Collaborated in an Agile team using Jira and Slack, adhering to SDLC and fostering efficient product development.	
Software Developer The Wing Spot	Toronto, ON October 2023 – September 2024
- Developed a full-stack web application using JavaScript and React.js, amplifying the restaurant's digital presence. - Integrated an online food ordering system that increased monthly sales revenue by 30% and weekly delivery volume by 50% due to an optimized self-checkout experience. - Created a real-time data analytics dashboard with Python and Matplotlib to visualize key sales and supply chain KPIs, enhancing decision-making and tracking efficiency metrics.	
Research Assistant – Software Development University of Westminster	London, UK – Remote September 2022 – July 2023
- Led Python, Java, and R workshops for 50+ students, mentoring the development of scalable data-driven solutions. - Competed in the Microsoft Imagine Cup 2023 (Lifestyle category) by designing a socially impactful AI-driven solution, including a detailed proposal, software design, and functional prototype.	

PROJECTS

Supervised ↗ vs. Unsupervised Models ↗ Technologies: R, Python, RStudio, Jupyter Notebooks Analyzed, visualized, and optimized ML models using clustering, PCA, regression, and classification techniques. Compared different algorithms using statistical indices, and enhanced prediction accuracy via hyperparameter tuning.
Minute-Mail Bot (Microsoft Hackathon's Prototype) ↗ Technologies: Python, JavaScript, Bootstrap, SQL, Flask, OpenAI LLM Minute-Mail is an AI-powered email assistant that generates context-sensitive messages, reduces manual writing time by 50% and provides real-time authentication and history tracking features.
Chrononet – Time-Series Electricity Forecasting ↗ Technologies: R, neuralnet, dplyr Chrononet is a neural network-based forecasting tool that predicts daily electricity consumption with 40% improved accuracy over a baseline regression-based model. Leverages optimized data processing and model tuning for accuracy.
Dermacare Consultation Management System ↗ Technologies: Java, Swing, JavaFX Interactive desktop app for scheduling patients and to reduce administrative workload by 30%, featuring CRUD operations, a console menu, and a user-friendly GUI. Accepts data in multiple formats and performs encryption for user privacy.

TECHNICAL SKILLS

- **Languages:** Python, Java, R, SQL, JavaScript, C, C++, HTML/CSS
- **Frameworks/Libraries:** React.js, Express.js, Bootstrap, Flask, FastAPI, Pandas, NumPy, scikit-learn, TensorFlow
- **Tools/Platforms:** Git, Docker, Node.js, RStudio, Firebase, AWS, Azure, MongoDB, MySQL, PostgreSQL
- **Other:** Data Structures & Algorithms, CI/CD, Agile/Scrum, REST APIs, Testing (Pytest, Jest), Linux
